

A dark-colored car is parked in a garage. In the background, there is a locker room with white lockers, some of which have sports equipment hanging on them. A large window is visible on the right wall, and a football helmet is mounted on the wall above the car. The floor is a light-colored, speckled material.

SUNEPOXY

SUNEPOXY

SunEpoxy is a two-component, low solids, water-based epoxy flooring coating designed for light commercial, and garage floors. It is an environmentally friendly, low-odor floor coating that provides a beautiful, easy-to-clean surface. SunEpoxy is resistant to water, chemicals, solvents, acids, and is abrasion resistant. Chips or quartz beads can be added to provide slip resistance.

All coats of SunEpoxy can be applied by brush or roller. An optional seeding of chips or quartz beads can be added. A second top-coat is then applied.

FEATURES & BENEFITS

- Seamless, monolithic floor
- Withstands a wide range of elements including oils, fats, and chemicals
- Wide array of economical resinous flooring options
- Can be varied from aggressively slip-resistant to an orange peel texture
- Add SunFlek, solid or multi-color SunChips, or SunMetal metallic pearl pigment
- Low odor and low volatile organics (VOC)
